

Willow Grove of Dublin

Exterior Lights

February 2, 2022

There are some streetlights out. This could be the same problem from early 2021 when AEP was in the community. Over a period, it was discovered the underground wires were damaged. This was exceedingly difficult to locate where the damage occurred underground. Over much investigation and digging the damage was located and repaired.

Fast forward about two weeks ago, seven light posts again were not operating. The association tried to locate the damage. This required digging underground but due to the frozen ground this scope of work will resume when the weather allows it.

In the meantime, solar panels for the existing non-operating light fixtures will be used. The association will test one and determine if it will work. If this is successful, then more panels will be purchased and attached to the remaining lights that are not working. We are hopeful this will temporarily solve the problem until a permanent repair is made.

Please keep your exterior lights on at night to provide enough illumination to safeguard the community.

Thank you for your efforts and patience!
